KEY address card ·numbers to characters

Every address that begins **bc1** is written in the same 32 characters. Each one stands for a number from 00 to 31. This card is the same for every key and every plate, and nothing on it is secret.

00	○○○○○	q	08	○●○○○	g	16	●○○○○	s	24	●●○○○	c
01	○○○○●	p	09	○●○○●	f	17	●○○○●	3	25	●●○○●	e

07	○○●●●	8	15	○●●●●	0	23	●○●●●	h	31	●●●●●	l

How to use it

Take the lock plate. Write **bc1q**. Then, row by row, look up the left number and the right number, and write the character beside each.

Nineteen rows give 38 characters. With bc1q in front, that is the address.

An example

A row reading **25 18** gives **e** then **j**.

Reading the dots directly

The five dots are worth 16, 8, 4, 2 and 1, left to right. Add the ones that are punched. The card shows the pattern for each number, so a group can also be matched by eye.

Why these characters

The alphabet is fixed by the Bitcoin address standard (BIP173). It leaves out **1**, **b**, **i** and **o**, so no two characters can be mistaken for each other in handwriting.

To cut out and keep with the plates

KEY address card ·bc1q + 38 ·00 = q
