Row strip

One throw of all eleven dice gives one row of the plate. Use for rows 1 to 11.

Sheet | **Row** | **Column**

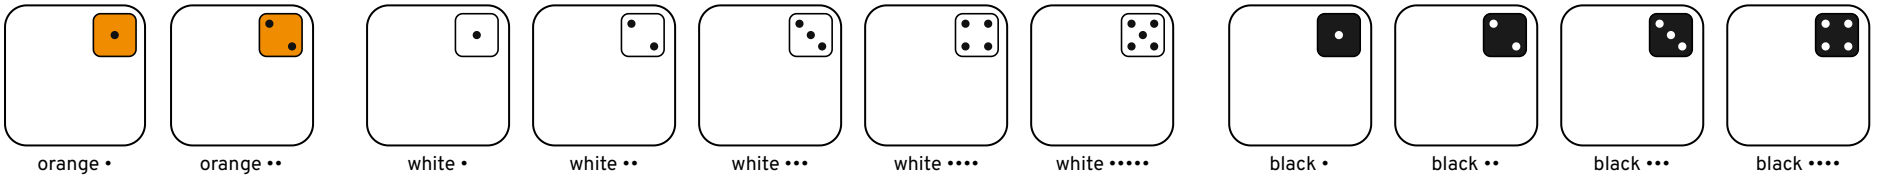

Place each die in the slot matching its colour and dots, without turning it. Read the top face only: **● dots = mark the cell**, ○ **blank = leave it empty** (ordinary dice: even ●, odd ○). The strip and the plate row read the same way, left to right.

Row strip

One throw of all eleven dice gives one row of the plate. Use for rows 1 to 11.

Sheet | **Row** | **Column**

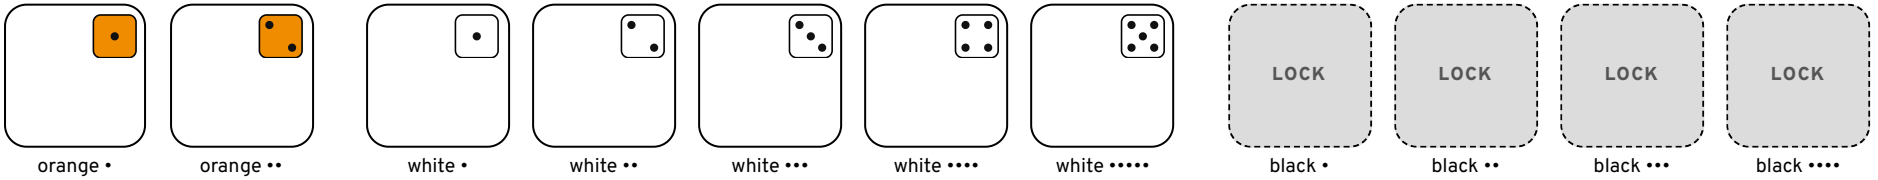

Place each die in the slot matching its colour and dots, without turning it. Read the top face only: **● dots = mark the cell**, ○ **blank = leave it empty** (ordinary dice: even ●, odd ○). The strip and the plate row read the same way, left to right.

Row 12 strip

After row 11: one throw of the 2 orange and 5 white dice only.

Sheet | **Row** | **Column: from LOCK, not from dice**

Read the top face only: **● dots = mark the cell**, ○ **blank = leave it empty** (ordinary dice: even ●, odd ○). These seven dice give the first seven cells of row 12. The four shaded cells stay empty until LOCK gives the checksum.
