OIKONOMIA

the art we keep at home

KEY + LOCK workshop

NOT FOR USE AS MONEY

DATE		**TIME**	
PLACE		**TIME ALLOWED**	about 3 hours, coffee break included
NAME	not needed: do not write your name anywhere	**MARK**	none. The TABLET works, or not yet

READ BEFORE YOU START

1. What you will make

Today you make a wooden TABLET with two faces. The **KEY** face is secret: dice, pins and numbers. The **LOCK** face is public: the one address of that key. At the end you take it home.

2. Silence

During the workshop only the facilitator speaks. You answer with your hands:

Hands flat on the table ready	**One open hand raised** help	**Phone held up, screen down** phone problem	**Fist on the table** I found a mismatch in a check	**Palm turned up** pins or a pen

3. Today's habits

Phone face down when not in use. No photos of the TABLET. Never say a number aloud. Work inside your own tray. These are the habits of a real key: today you practise them on a practice key.

4. Materials allowed

On your tray: 11 dice (2 orange, 5 white, 4 black), the dice strip, number sheets A–D, the address card, the TABLET, pins and a pen. Plus your own phone, charged.

5. Your phone

Scan the code beside this and open the page. You will need it for the checks and the LOCK face; wait for the facilitator's signal.

Do not turn over until the end of the workshop.

OIKONOMIA

the art we keep at home

KEY + LOCK workshop

NOT FOR USE AS MONEY

TO READ AT HOME

1. **What you made**
   A real Bitcoin key, made by hand: the KEY face. And its one address: the LOCK face. Every row has two records, the pins and the written numbers, which check each other.

2. **What it is not**
   It is not a safe. A phone and the room saw it being made: it is a practice key. Never send money to its address. That is why it carries the sign **not for use as money**.

3. **If a pin falls out**
   The written numbers are the real record. Find the row's number on the number sheet: the dots of its row and column tell you where the pin goes.

4. **Checking it again**
   Open the page from the code. Type the 11 numbers, tap the 7 dice dots of row 12 and press Calculate. The address must match the one written on the LOCK face, letter for letter.

5. **The next step**
   A real key is made the same way, with the same hands, but in private: with LOCK, the transparent calculator, and a steel plate. Anyone who wants to can come back.

NOTES

the art we keep at home: the TABLET is the object, the habit is the art.
